

WELCOME TO MARYGBEAUTY SPA!

WHAT IS THE DIODE LASER?

It is a permanent hair removal system. To remove hair from the root, a beam of light penetrates the skin without damaging it, destroying the follicle so the hair does not reappear.

ADVANTAGES

- Allows hair to be removed from large areas of the body, being able to remove up to 90% after four or eight sessions, depending on the extent of the skin on which it is applied.
- The effect is prolonged in time, and the definitive elimination of a large part of the hair from the treated areas is achieved.
- Painless; you may feel slight heat when the cosmetologist handles the parameters in sensitive areas.

DISADVANTAGES

- It is ineffective when the hair is light (blonde and redhead) and fine.
- Does not remove gray hair.
- It should not be applied to the eyebrows, given the risk of causing eye damage (eye protection glasses should always be used).
- Dark skin needs more sessions, and 90% removal is not guaranteed.
- It is not possible to laser the tattoo.

HOW MANY SESSIONS DO I NEED?

- Most people will need at least 4-8 sessions with a diode laser.
- You must come to your treatment every 21-22 days for optimal results.
 - Please don't use waxes or tweezers—only scissors and razors until the treatment is finished.

HOW TO COME TO YOUR FIRST CONSULTATION?

- You should be well waxed only with a shaver.
- No long hair or short barrels. If you come like this, you will get irritated during the session, and the machine will not be able to remove the hair.
- You must wax one day before coming to the consultation, preferably.
- If you do it the same day, only your skin will be more sensitive.

POST CARE

- Place sunscreen after the session, especially if it is face or legs and will be exposed to the sun.
- After the laser session, take a bath to remove the remains of the gel, and it is advisable to hydrate yourself very well with creams, etc.
- After the laser, use creams, deodorant, and sunscreen if you can.
- Expect to go to the beach within 24 hours and use sunscreen in the area worked with a laser diode.

Mary specializes in Electrolysis, Laser Hair Removal in Laser Diodo and works as a Health coach.
